RIDWAN AJANAKU

Senior Frontend Engineer

ridwan@olakunle.dev | olakunle.dev
github.com/lakesxo | linkedin.com/in/ridwan-ajanaku

PROFILE

Senior frontend engineer specialising in React, Next.js and TypeScript across fintech, healthcare and developer tools. Lead frontend development at SunFi and independently built Celebreet, a live product with paying customers. Combine technical leadership with hands-on component architecture, performance optimisation, accessibility and automated testing.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Electron, Redux

UI engineering: Design systems, reusable components, Storybook, Tailwind CSS, accessibility

Testing and quality: Jest, Vitest, React Testing Library, code reviews, performance profiling

Backend: Node.js, PostgreSQL, Prisma, REST APIs, authentication and payment integrations

Delivery: Git, Jenkins, Azure, AWS, Vercel, CI/CD, Figma, remote collaboration

PROFESSIONAL EXPERIENCE

SunFi **Oct 2024 - Present**

Product Engineer III | Remote

- Lead frontend engineering for a solar financing platform using React, TypeScript and Tailwind CSS; guide technical decisions, mentor engineers and review code.
- Reduced page load time by 40% through lazy loading, route-based code splitting and bundle analysis.
- Build reusable UI components and work with product, design and backend teams to deliver consistent financing and onboarding experiences.
- Replaced a lengthy multi-page KYC form with a single-page onboarding flow.
- Persisted filters and pagination in the URL so shared links open the same filtered results.
- Integrate payment, identity verification and solar provider APIs, with input validation and secure authentication flows.
- Maintain Jenkins CI/CD pipelines for automated testing and application releases.

Cuvris **Sep 2023 - Oct 2024**

Software Engineer | Remote

- Built healthcare compliance workflows with React, Next.js, Node.js and TypeScript, spanning frontend interfaces and backend services.
- Implemented document citations that scroll to and highlight the source passage when users click extracted data, helping reviewers verify its origin.
- Developed Prisma and PostgreSQL services for complex data relationships and audit trails; maintained Azure deployments and CI/CD pipelines.
- Improved rendering performance through code splitting, lazy loading, memoization and more efficient state management.

PROFESSIONAL EXPERIENCE CONTINUED

AccelByte **Aug 2022 - Sep 2023**

Software Engineer | Remote

- Developed React and TypeScript features for web and Electron desktop applications in the AccelByte Development Toolkit, collaborating with a distributed team.
- Refactored class components into functional components and addressed code quality issues with SonarQube to improve maintainability.
- Reduced page load time by 40% through image compression, code minification and lazy loading.
- Built crash investigation views combining the 10 seconds of video before a crash with crash logs and hardware details.
- Implemented desktop bandwidth throttling so customers could limit network usage during concurrent game-build downloads; shipped guided onboarding across web and desktop.

Optisource Technologies **Dec 2020 - Feb 2022**

Frontend Developer

- Proposed and delivered a migration from Razor views in C# to React, separating frontend and backend concerns and improving maintainability.
- Built interfaces with JavaScript, TypeScript and React; implemented SEO improvements that increased organic search traffic by 25%.

SELECTED PRODUCT

Celebreet

Founder and Product Engineer | celebreet.com

- Independently designed, built and launched a digital celebration platform that now serves paying customers, owning the product from concept through production.
- Built an editor for personalised celebrations combining messages, photos, video and music into a shareable link, alongside payment integration.
- Added invite-based collaboration so multiple contributors can create individual slides under one celebration link.
- Introduced five-second polling in the collaboration flow so contributors can see updates without manually refreshing.

EDUCATION

Federal University of Agriculture Abeokuta

Bachelor of Engineering, Electrical and Electronics Engineering | 2014 - 2020
